

Global Leaders In Maintenance & Reliability

Work Management Consulting

Big Goals Deserve Big Results.

Make It Happen With Marshall Institute.

The Challenge: Assuring optimum use of resources, and delivering maintenance services more effectively and efficiently, and at a lower cost. Marshall Institute's expert consultants are skilled in the use of the most popular ERP/EAM systems used in industry and bring a coaching/mentoring process to help clients advance their work management systems to "best in class" status. Marshall Institute can assist in the organizational design, workflow process mapping, and ultimate development of documented workflow processes, ensuring standardization and consistency across the organization. Once completed, this establishes an excellent platform to begin training, coaching, and mentoring the key stakeholders in how they interact with the work processes.

Marshall Institute Provides Consulting and Training in:

- Workflow management using SAP PM, Maximo, and other key programs
- Work identification
- Work request validation and approval
- Work order planning & scheduling
- Work order planning and closeout
- Business Process Improvement (BPI) tools
- Metrics development
- Cost management methodology applied to daily/weekly work management
- Preventive maintenance optimization
- Kitting, staging, and material lay-up
- Shutdown management

In addition, Marshall Institute can provide follow-up assessments or audits to sustain the gains and provide continuous improvement.

Contact us to develop, improve, optimize, and sustain world class energy maintenance assessment programs.

Client Case Study

Offshore in the North Sea: Implemented a robust work management process that included initial training and ongoing coaching/mentoring, followed by an audit process. After one year, the platform's labor productivity improved by 50%.
